## **DETAILED ACTION**

### **CLAIM RENUMBERING**

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 14-35 have been renumbered as 13-34, respectively. This is to correct for a missing claim 13, as originally numbered.**RESTRICTION**

### **REQUIREMENT**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13 and 20, drawn to a method and machine readable form for predicting the soybean cyst nematode resistance of soybean genotypes involving obtaining a spectroscopic scan of a soybean sample, classified in class 435, subclass 4.
- II. Claims 14-19, drawn to an electronically programmable apparatus for predicting the soybean nematode resistance of soybean genotypes utilizing a spectrophotometer without scanning as a requirement, classified in class 422, subclass 50.
- III. Claims 21, 22, and 34; drawn to soybean seeds, classified in class 800, subclass 312.

Art Unit: 1631

- IV. Claims 23-32, drawn to a method for comparing genotypes via a predictive model, classified in class 702, subclass 19.
- V. Claim 33, drawn to a plant breeding program, classified in class 800, subclass 260.

The inventions are distinct, each from the other because:

Inventions of Groups I, II, and IV vs. Group V are related as process of making vs. process of using the product. The use as claimed cannot be practiced with a materially different product. Since the seed product Group III is inclusive of any soybean seeds that may be evaluated and is therefore not allowable, restriction is proper between said method of making and method of using. The product claim will be examined along with the elected invention (MPEP § 806.05(i)).

The inventions of Groups I, II, and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of Groups I, II, and IV are directed to distinct and different practices summarized as scanning methods and machine readable form in Group I; spectrophotometer practice without requiring spectral scanning as in Group II; and comparing spectra with a predictive model not defined in the claims as in Group IV.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1631

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
